(54) LIGHT-EMITTING APPARATUS AND RECORDING APPARATUS USING THE SAME

(57)Abstract:

PROBLEM TO BE SOLVED: To increase use efficiency for light and illuminate a recording paper with high radiation illuminance, by providing a wiring board and a light-emitting element loaded on the wiring board, and setting a plate body having a light transmission part at a position corresponding to the light-emitting element, in a direction in which the light-emitting element emits light.

SOLUTION: An LED element 4 is arranged at a predetermined point on a printed wiring board 1 and fixed by a conductive adhesive or the like. A wiring is provided to the printed wiring board 1 by a conductive pattern 10 so as to connect the LED element 4 electrically and obtain light emission from the LED element. A plate body 7 having a light transmission part 7p at a position corresponding to the LED element 4 is set in a direction in which the LED element 4 emits light. A diameter of an opening of the light transmission part 7p is not larger than 1 mm. Moreover, the LED element 4, a part of the conductive pattern 10 and a metallic thin wire are sealed by a resin on a primary face of the printed wiring board 1. Since a radiated luminous flux passing through the light transmission part 7p is increased, an illuminance of light radiated to a recording paper is enhanced.
